

Galvanized Steel Event Fencing and Barricades

CrowdStopper® is the tried-and-true steel barricade system used for events, festivals, and concerts worldwide. This stable, durable crowd control fencing is both effective and easy to set up.

CrowdStopper is built from high-quality carbon steel and is hot-dipped galvanized inside and out to prevent rust and corrosion and ensure long-term weather resistance. All CrowdStopper frames are made from durable 1.5 in. OD 16-gauge or 1/25 in. OD 14-gauge steel tubing. Barricades interlock using an industry-standard hook and half-loop fastening system.

Used for:

- Festivals
- Sports Events
- Concerts
- Political Rallies
- Community Functions
- Police Activity
- Construction Zones
- Parades

Made from weather-resistant, galvanized steel

Stacks neatly for easy and efficient transport

Multiple foot styles to suit your needs

Flat Foot

The Flat Foot is ideal for special events that require directing crowds or traffic in parallel lines. Flat Foot minimizes tripping hazards and vehicle tires can roll over this foot style easily.

Bridge Foot

The Bridge Foot offers maximum stability - best choice for parades, rallies or concerts and soft or uneven ground conditions.

CROWDSTOPPER® GO

ECONOMY VERSION

Lightweight barricade for easy installation and transportation

CrowdStopper GO is a portable, lightweight version of our traditional CrowdStopper barricade. A reinforced foot and two-point connection system make the panels durable and effective at nearly half the weight. CrowdStopper GO is an economical alternative to our traditional CrowdStopper option. Pedestrian gate panels are available in high-visibility red.
